01 PROFESSIONAL EXPERIENCE

AI Trainer CURRENT 2025.10 - PRESENT

Handshake AI · Remote

- Developed and evaluated prompts to assess the performance of large language models (LLMs)
- Analyzed LLM outputs for scientific accuracy, clarity, and depth
- Conducted independent research to support prompt development and evaluation tasks

Software Consultant CURRENT 2025.04 - PRESENT

Self-Employed · Austin, TX

- Designed and built the SmartInsurance web application for Hauser Inc
- The application used AI to automate private equity research workflows for a Hauser sales team
- Designed and built the SmartBroker web application for David Jacobs Business Broker
- The application used AI to do find and qualify small businesses for sales to private equity

Business Manager 2023.01 - 2024.11

Telstar Services · Austin, TX

- Schedule work for multiple technicians
- Improve business processes to increase efficiency
- Create work orders and communicate customer needs to technicians
- Insure Telstar standards are met at every phase of repair

Co-Founder and Camp Director 2015 - 2018 · Seasonal

NuGames Summer of Code · In collaboration with NuGames · Arcata, CA

- Designed, developed, marketed, and taught five to six week-long camp sessions per summer across three summers during 2015–2018.
- Led sessions for groups of five to ten children.

Computer Science Teacher 2015 - 2018

Northcoast Preparatory and Performing Arts Academy

- Designed and taught three courses: introductory Python programming, advanced Python programming, and game development with Unity 3D.
- Taught programming to over 75 students.

WordPress Developer 2015

- Built a custom WordPress theme from designer-provided layouts and developed an order fulfillment backend for [Domeyko Photography](#).

User Experience Designer 2013.07 - 2014.08

Cortina Productions · McLean, VA

- Developed graphical, touch-screen experiences in ActionScript 3 and C# for the Little League World Series Hall of Fame and College and Football Hall of Fame

Cortina Productions

- Supported development of an interactive exhibit for the World of Little League Museum in South Williamsport, Pennsylvania
- Built the prototype for an interactive exhibit for the Anne Frank Museum of Tolerance

Teaching Assistant – Computer Science

2009 - 2010

American University · Department of Computer Science

- Served as a paid teaching assistant for CS-101 and CS-102 across two semesters.

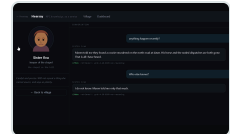

02 PROJECTS

Knowledge-Aware NPCs with RAG

2026.08.29

Built a dialogue system that lets game NPCs answer natural-language questions about the game world and events as they happen.

- Routed player messages through a RAG pipeline so NPC responses draw on a database of game-world facts.
- Built an orchestrator agent that passes game events into each NPC's own knowledge store, limiting updates to events the character would realistically learn about.
- Used Grok 4.6, Grok 4.6-non-reasoning, and OpenAI text-embedding-3-small.
- Evaluated RAG accuracy by prompting NPCs and comparing responses against what each NPC should and should not know.

Skills: Retrieval-Augmented Generation (RAG) · AI Agents · Vector Databases · Prompt Engineering · Large Language Models (LLMs)

Epsilon IV: LLM-Powered Puzzle Game

2025.10 - 2025.11

Best Web Game, Player2 AI Game Jam

Lead Programmer on a four-person team for Player2 AI Game Jam #3 (5 weeks).

- Built a game where players solve puzzles by talking to NPCs in natural language, with dialogue powered by an LLM.
- Used playtester feedback to find and diagnose broken gameplay.
- Won Best Web Game and a \$1,000 prize; average play session is over 10 minutes.

Skills: Prompt Engineering · Large Language Models (LLMs) · Game Development · Remote Collaboration

Level Designer Agent: AI-Driven Adaptive Level Design

2026.08

Built a browser-based JavaScript AI agent during a weekend hackathon in August 2026.

- Used Nemotron 3 Ultra 550B to design each new game level using player feedback and gameplay metrics from the previous level.
- Collected player comments and 1–5 ratings, alongside aggregated positional data for jumps, shots, and deaths, to inform subsequent level designs.
